

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Schedule Returns

STATISTICAL ANALYSIS OF BIOLOGICAL DATA (Completion: 34/135 (25.2%))

MySkills Reflection

MySkills gives you a framework to highlight and articulate your skills, potentially to future employers, but also to reflect upon them yourself. The skills that form the framework are shown below, divided across six Skill Groups:

- Working with others – Teamwork | Communication | Leadership
- Active citizenship – Global citizens | Sustainability | Inclusivity and cultural awareness
- Managing yourself – Time management and organisation | Self-motivation | Resilience
- Enterprise & innovation – Creativity | Independence | Entrepreneurship
- Analytical skills – Digital fluency | Information literacy | Critical thinking and problem solving
- Career readiness – Opportunity awareness | Career planning & decision making | Presenting yourself

Using the options below, choose at least one skill (up to a maximum of three) that you have developed during this course.

Select the Skill Group that contains your chosen skill:

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Describe how you have developed this skill.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

I have learned to manage my time properly and review what I have learned, which is very helpful to me

Regularly working with different data sets allowed me to identify trends, continually practice my analytical skills and using different techniques allowing me to identify trends.

Independently analyze course content, master R language and apply it to solve practical problems

By doing tasks and attending lectures

Learning the code language to then developing the code and scripts and using templates and examples to trial and error different lines of code

I've learned how to use stats to answer biological questions and help me understand questions of statistical analysis, which before I didn't know how to do.

These coding sessions allowed me to efficiently use my time in order to finish in the practical classes

learning valuable skills that will be needed for careers in biosci

Time management with the recurring exams and computer coursework

I have learned how to think critically and analyse biological data and statistics.

Looking at data patterns and relationships in a different way.

When I encounter a new problem, this course has helped me develop good analytical habits.

resilience against the difficulty of the course, self motivation & time management to study outside of classes

Getting assignments done

Through the course of study and practice

By allocating time reasonably to preview and review courses, I have developed good study habits.

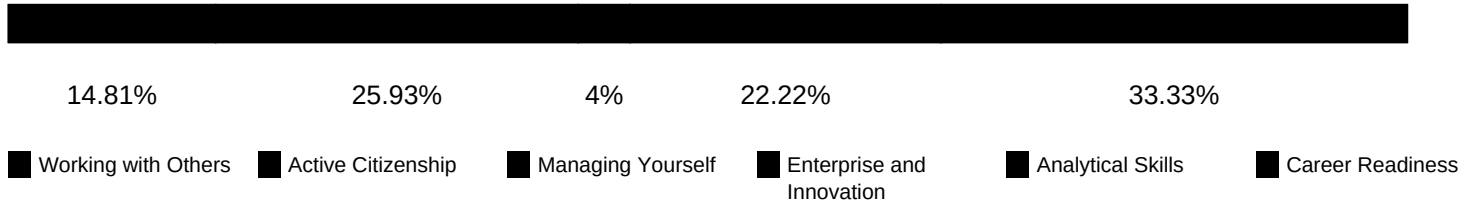

the fast pace course required me to constantly be on top of all of my work.

Analyze the data based on the text and information provided.

I asked people around me and the teacher about course problems and discussed problems with my classmates

Select the Skill Group that contains your chosen skill:

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Describe how you have developed this skill.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

I learned to work with others and ask questions that I wouldn't ask myself

It has allowed me to be aware of employment opportunities in statistical analysis of which I was unaware was such a employable sector. It is good to know there is plenty of employment in statistical analysis.

Work with group members to discuss difficult issues

This is something I think will be useful in what I want to do career wise in finding trends and being able to display them visually

I've had to actively prioritise this class because it's a subject I know I'm not confident in, and therefore had to put more effort into learning how to use R and understanding the theory behind statistical analysis.

By using RStudio i felt like i developed my critical thinking and problem solving as we had to figure out hidden assumptions as well as how to fix broken datasets

motivating myself and working independently in workshops

Skills with using RStudio and analysing data

I have developed my time management skills.

Another skill that I can add to open more opportunities for myself.

Through the study of this course, I have gained a better understanding of statistics and data visualization, which is very useful for my career.

will use R and stats in my career

Discuss questions that are confusing with your classmates

Form a study group with friends to discuss and solve problems together.

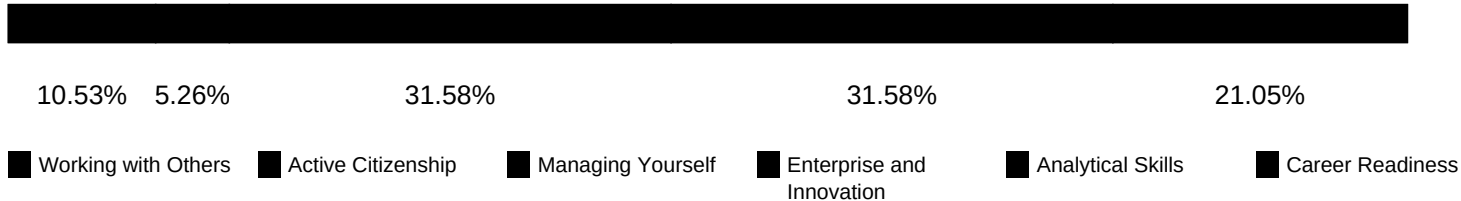

I worked on interrupting data continuously throughout the course.

Complete tasks independently, exams.

I prepare and review my lessons on time every day

Select the Skill Group that contains your chosen skill:

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Describe how you have developed this skill.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Perhaps discussing real world issues involved in data sets and how important statistical analysis can be as well as not to always believe data as there are usually other factors affecting relationships between variables.

I've worked with a friend, who does stats for a living, throughout the course to focus on the subjects that I didn't quite understand the first time round, which really helped prepare me for assessments.

In a few of these coding classes it was easier to work with other people in order to bounce ideas and question off of each other and confirming what we were doing was right

learning more about and building confidence in plotting data

Knowledge of essential software for data analysis

I have learned skills I believe I will need in my future career.

solving issues that came up in R and the stats, usign digital software

Preview and practice before class every day

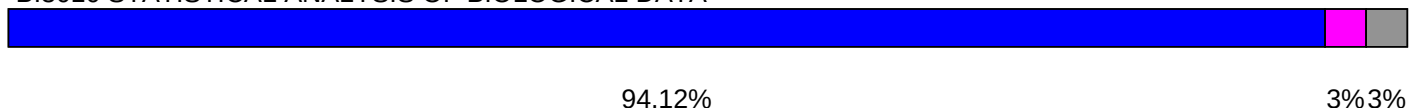

I have learned a lot of knowledge and am able to analyze problems, identify shortcomings, and solve problems through various charts and data.

Mastering drawing skills can prepare you for future career development.

I deeply understand the course content and try to apply them

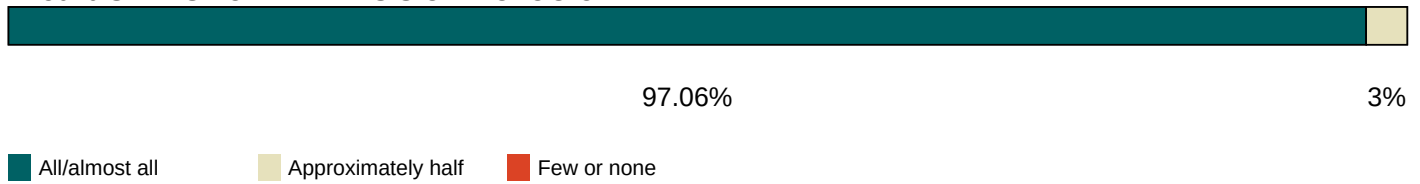

Why did you take this course?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

my degree possibilities
How many teaching sessions (including lectures, tutorials, seminars, lab sessions, etc.) did you attend?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

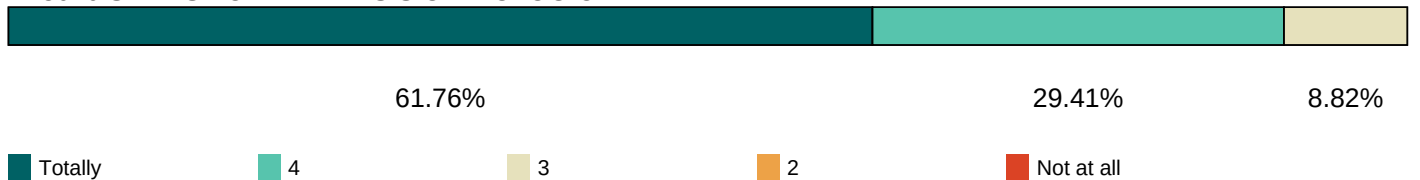

Teaching was effective.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

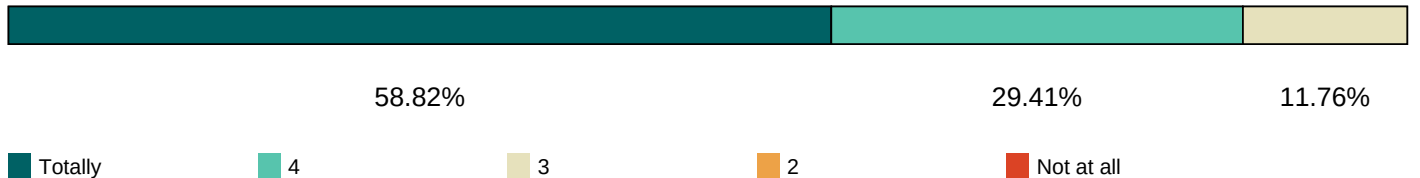

Staff are good at explaining things.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

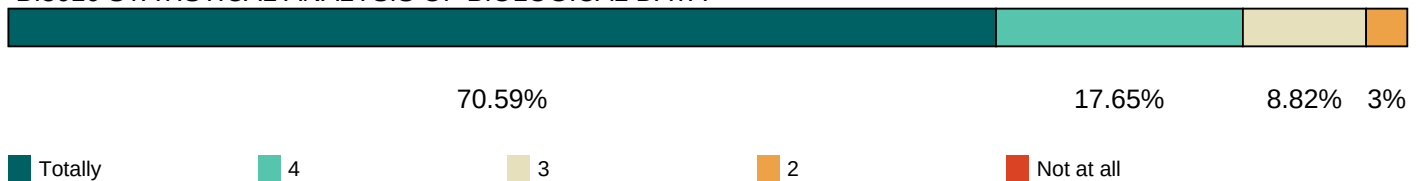

Staff have made the subject interesting.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

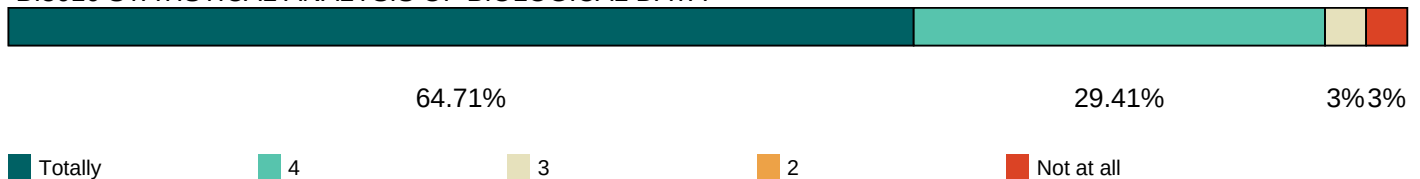

The course is intellectually stimulating.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

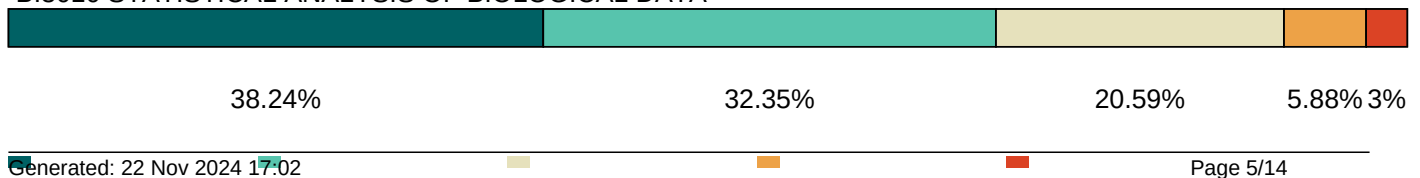

My course has challenged me to achieve my best work.

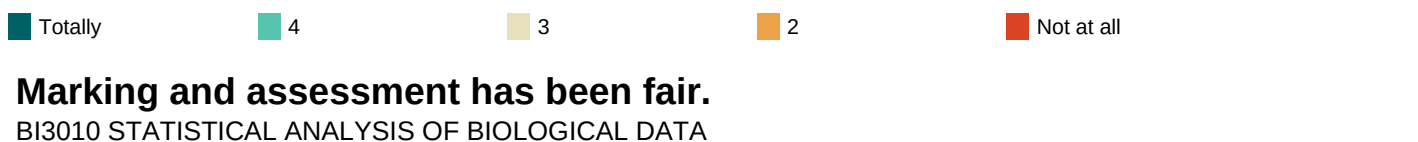

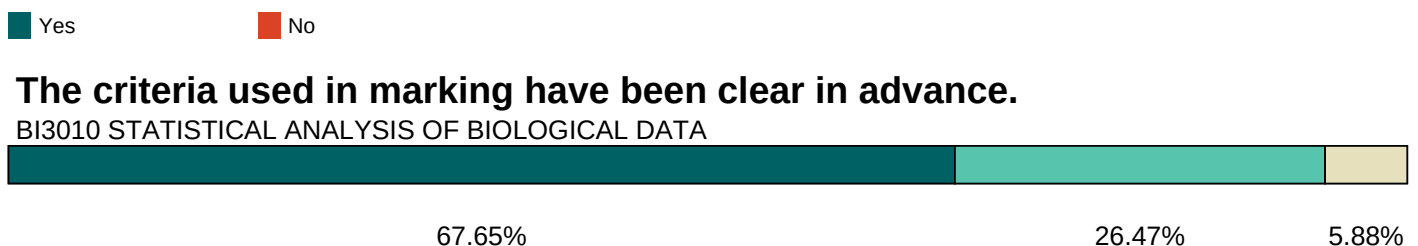

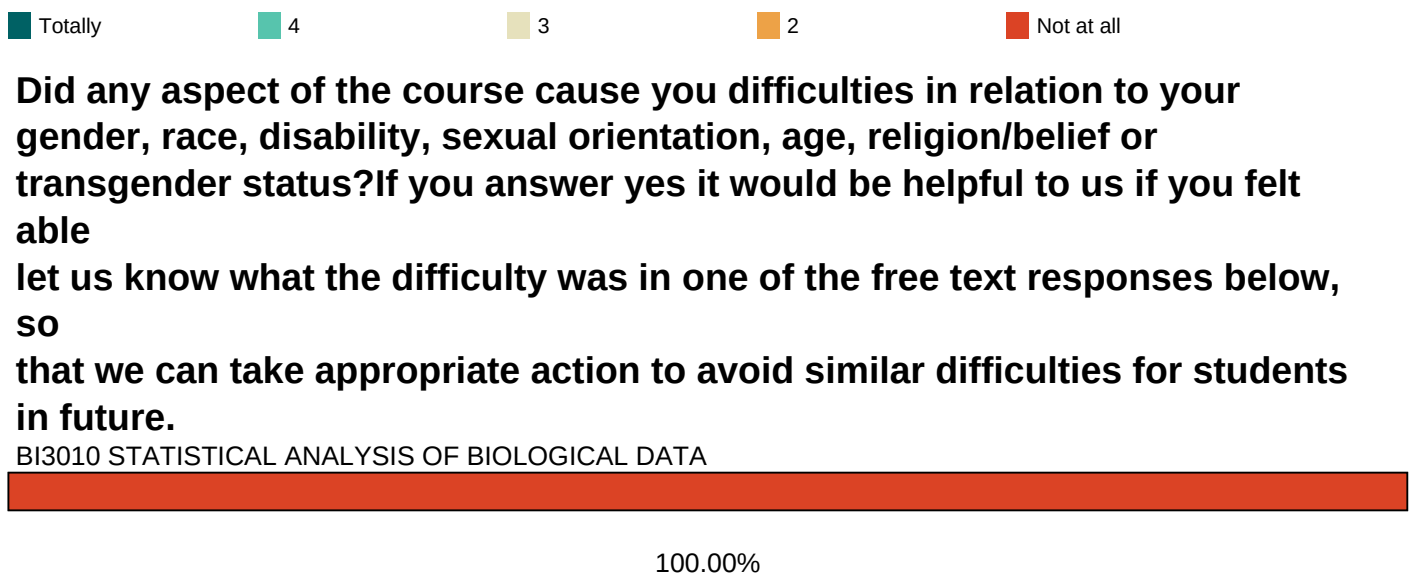

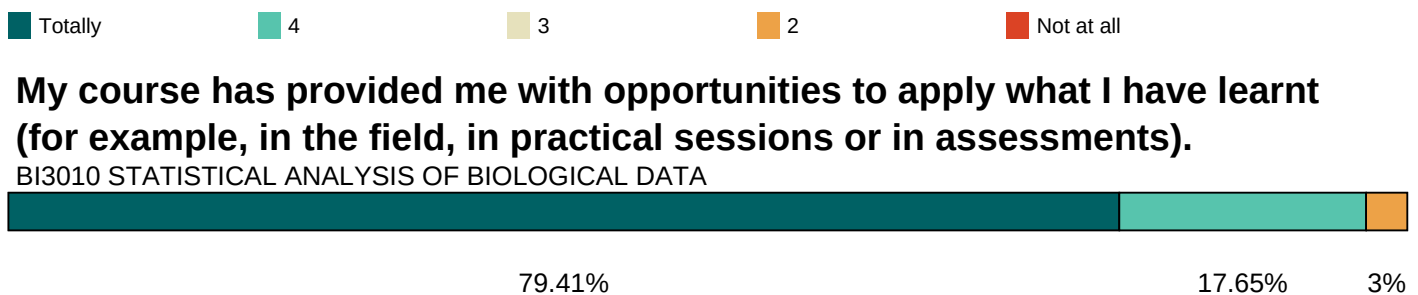

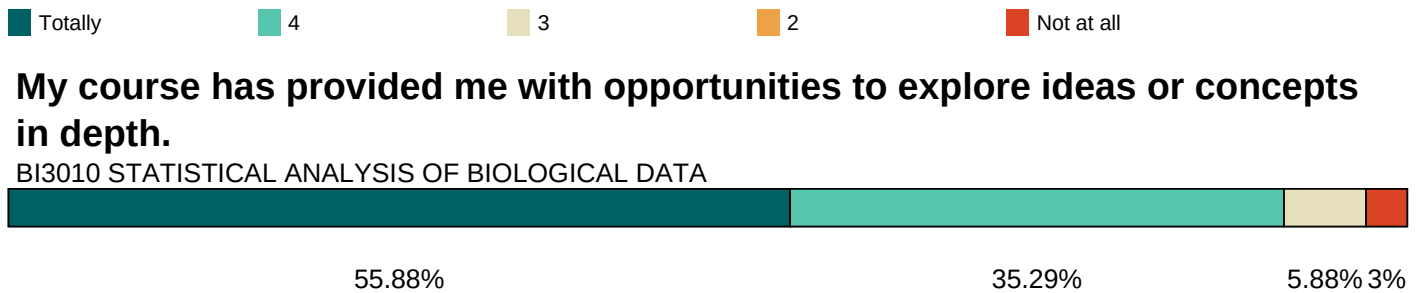

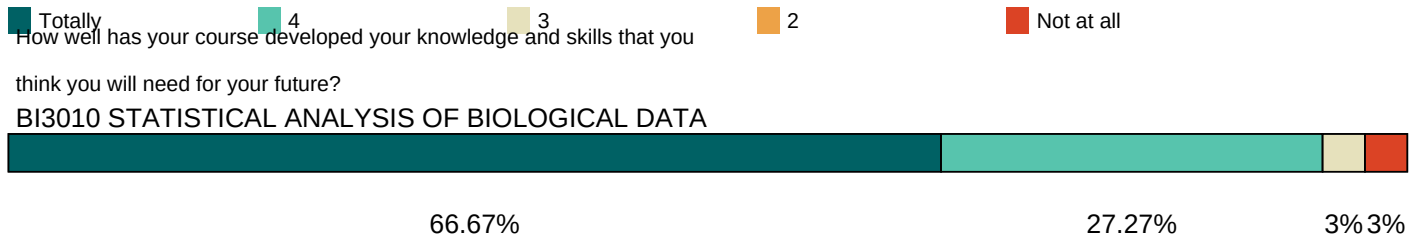

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Did you enjoy the course?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

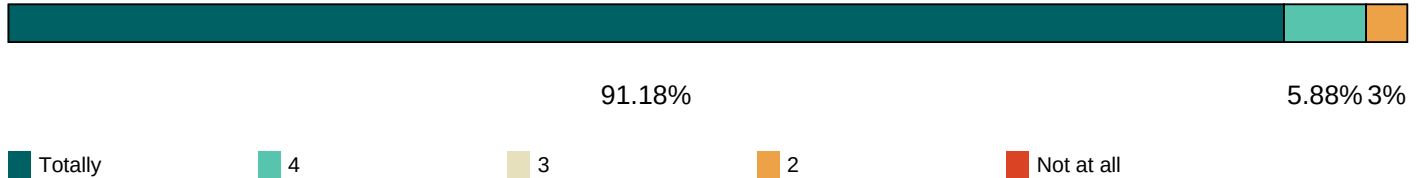

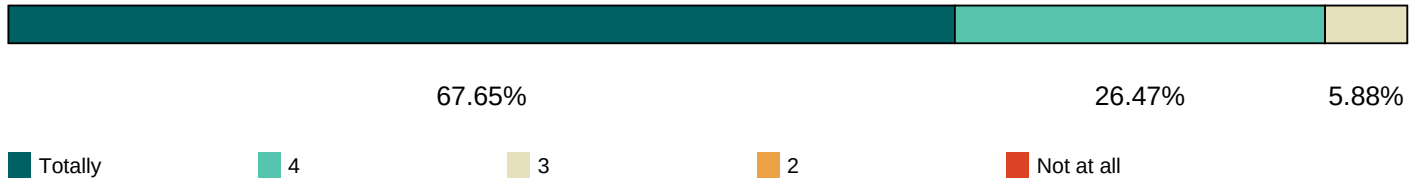

Feedback on my work has been timely.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

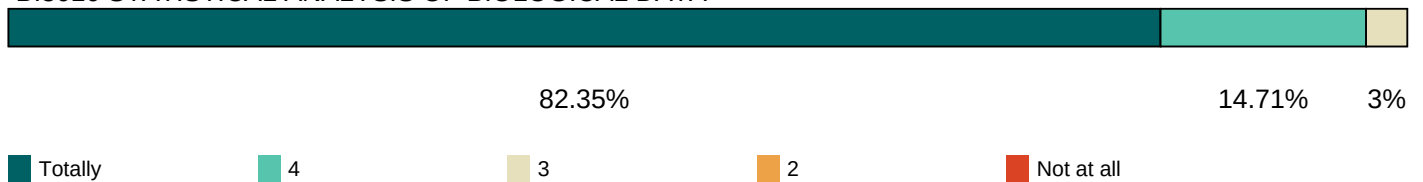

How often does feedback help you to improve your work?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

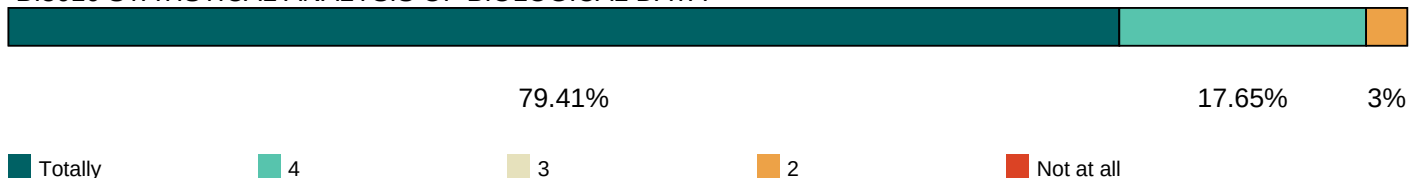

I have been able to contact staff when I needed to.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

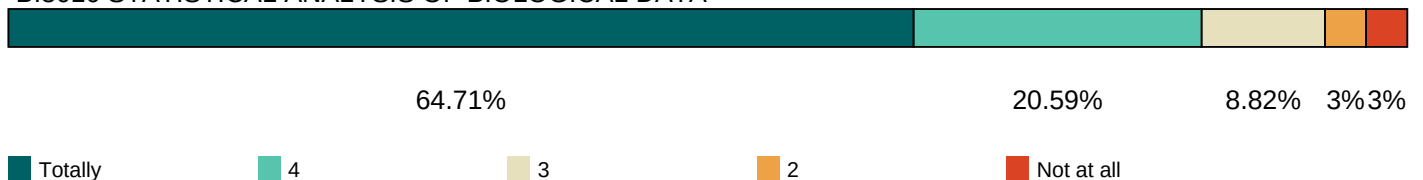

The course is well organised and running smoothly.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

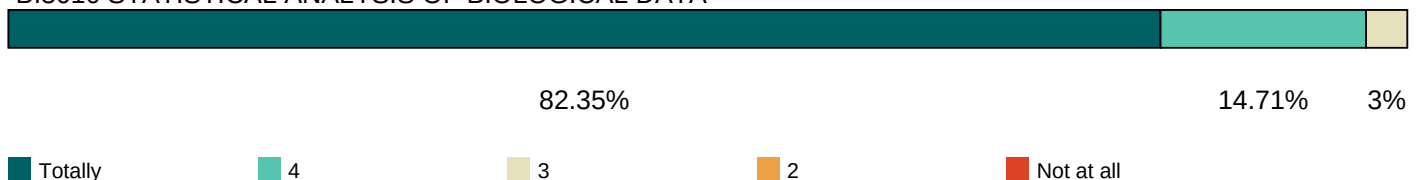

The timetable works efficiently for me.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

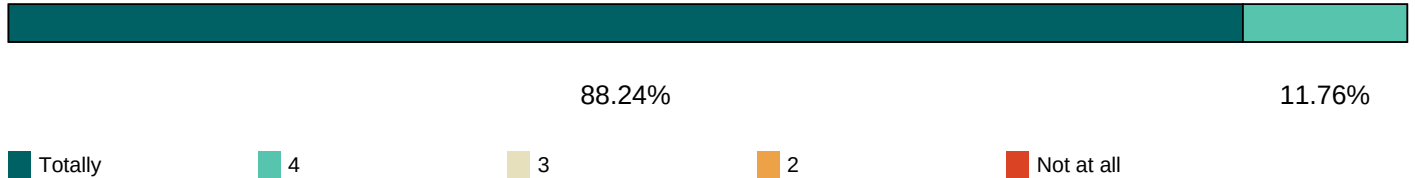

Any changes in the course or teaching have been communicated effectively.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

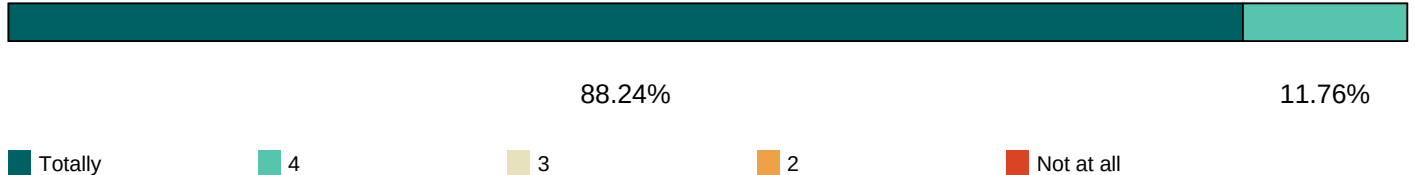

I have had the right opportunities to provide feedback on my course.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Staff value students' views and opinions about the course.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

It is clear how students' feedback on the course has been acted on.

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Any comments or concerns about the teaching on your course?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

No

No

the teaching and staff were amazing, Deon and Michelle as well as the PhD students all helped us effectively and answered any questions we had.

NO

The teaching done by Deon Roos was absolutely amazing.

Deon's lectures were really well thought out and put together, aiming to present the course in the most accessible way possible, which it was. As a direct entry student, my only experience with stats was the summer course I had to take to get into 3rd year of my course and so stats is a totally new and scary subject for me, but the way Deon taught this class made it much less daunting and made it interesting and easier to comprehend. The slides looked good, made sense, and the way Deon taught was engaging and interesting.

no

teaching was effective and the lecturer made the topics interesting and fun

Concepts explained very well, staff were friendly and were always seeking feedback. I felt very well prepared and informed for assessments.

No.

No

stats is difficult to teach but was taught really well and in depth, the workshops were extremely helpful with knowledgeable demonstrators, clear instructions and enough extra help outside of classes

I really like how it was done. The instructions were clear which allowed me to work through it by myself but the staff were helpful if i was stuck. The walkthroughs and answers posted really helped with understanding.

No

no

No.

Deon was good at explaining things and made it easy for me to understand.

Deon went above and beyond, answered all of my questions and spent so much time going over material with me.

no

no

Any comments or concerns about learning opportunities on your course?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

No

No

There was way too much information packed into a too-short time period, especially for the amount and timetabling of assessments we had.

NO

Generally really great, maybe more info for people who want to get ahead and try harder stuff

No.

no

No.

No

No

no

No

no

no

What limited your attendance and do you feel there is anything that could have been done for you to improve your attendance?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

I attended the whole course completely

No

I was being overwhelmed by the course and other workload. Lack of attendance for lectures was due to the fact that I didn't find them engaging enough so found watching the recordings in a faster speed a better use of my time considering other workload too.

Nothing

I would maybe suggest not making the practical mandatory, it will help us organise ourselves better and actually do the practical when we feel like doing it.

N/A - I only missed a workshop and that was due to illness.

nothing

Disability, Could not have been improved

Nothing can limit my attendance rate.

N/A

disability made it difficult to complete/attend to the 2 hour lectures but accommodations were made with the availability of the pre recorded online lectures, made the course a lot easier for me despite not attending some lectures

There were a lot of sessions per week in this course and some took place quite late in the day

no

No.

I attended all the classes.

There is no restriction on my attendance. I attend every class.

What did you like about the course?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Objective and meaningful

Having both lectures and workshops helped improve my abilities significantly allowing for constant practice and application of knowledge. Deon's teaching made it extremely simple to understand and relaxed approach and relatable manner made lectures very interesting. His videos going over the tests helped significantly allowing me to improve my grade with each assessment. The quick feedback on tests was also extremely beneficial. The assessments also felt very relaxed and the practice test was a good idea as it made me much less nervous and

improved my performance. The topics involved in the test were also fascinating making it more engaging and felt very relevant for my course, in particular the datasets. The tests also had a perfect balance of questions and an appropriate time limit.

R language

The lecturers were amazing the course just needs some rethinking mainly the timetabling and intensive content, there isn't enough time to learn before/between assessments

Both lecture and workshop

The recordings, the walking through of the quizzes and the details corrections of each practicals.

Great explanations and I liked the emphasis on responsible modeling/statistics

I really liked how the course is set up. the work instructions are very clear with clear examples, easy to follow and its well thought out. The structure was also good, it started at the beginning, laid everything out, and built on itself very well. I liked the practice test in the beginning as well, gave a good example for what the tests would look like

I liked the layout of lecture first, then workshop to apply what we'd learned in the lecture to practical scenarios. I also liked how laid back the workshops were, and that we could work at our own speed.

That the lectures explained everything before the computer practicals, this gave me a chance to better understand what the lecture was explaining

effective teaching and workshop sessions to learn actively and put lecture material to use

Explained very well and felt very relevant to future employment

Although I was initially intimidated, they did not overwhelm me with information and made it clear when we did not need to know certain information. I felt very supported and a sense of community.

I liked that the sessions were laid out in such a way that the theory was taught then the application followed and that there was a practice exam. The feedback on each of the exams was great too.

The teacher spoke very well, and the example analysis in class helped me better understand the knowledge. The workshop was also beneficial for my learning.

Learning how to analyse data

very very helpful and understanding lecturer with background in stats who made every effort to make the course as accessible as possible and understood how difficult stats is

It was very hands on learning, I got to apply lectures to practicals for every topic. It was more approachable than other stats courses I have taken.

It helps me understand and learn some basic knowledge of R language and related applications, which is of great help to my study and professional development

Yes

That the lectures were engaging and there was lots of actual practical time.

The teacher is very patient and the knowledge is very applicable, so the knowledge learned can be applied in a timely manner.

All aspects are very good

What did you dislike about the course?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

A little difficult

No

the intensity of assessments and the material covered in lectures - it's difficult to visualise/understand statistical knowledge from a lecture unless you're sitting doing the steps even if it's theoretical

NOTHING

That the attendance was mandatory.

Nothing specifically about the course - it's just the subject I didn't enjoy that much :(

nothing

That other courses within the degree programme do not utilise R and instead we sort of have to just forget about it all for a bit.

Experience was needed to determine if diagnostic plots were acceptable or not, which I did not have. I managed to learn what was okay but I would have liked some more examples as to what is not okay.

I didn't understand the extra datasets to use for revision because as there were no answers I didn't know whether I was getting it right or not. I wish there had been practice assessments before each exam so I could test that I knew what had just been taught.

I think there could be more case studies to cover various aspects.

Found it a little fast paced at times

assessment format

This class is a little difficult

No.

no

All aspects are very good

How did you find the work load on the course? BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

Appropriate workload

Perfect amount.

suitable

Extremely intense and very overwhelming

At first it's fine but it gets really intense by the end (which make sense)

It was good, the quizzes every week were a lot at a time

Balanced, no unnecessary homework as we covered everything we needed to do in lectures or workshops.

good

very comfortable workload

Very Manageable

Manageable. I enjoyed the lack of assessed coursework, and that it was based purely on tests.

I found the work load very manageable

Very suitable.

A bit fast paced, too much work all at once

manageable

It was a bit more than other UoA courses

The amount of work in this course is just right

Good.

Very challenging but that is the nature of stats.

Moderate.

Just right

Any comments or concerns about assessment and feedback on your course?

BI3010 STATISTICAL ANALYSIS OF BIOLOGICAL DATA

not have

No

feedback was great, and if you wanted a one-on-one session with the lecturers to go over your test they were more than happy to do this with you. My only concern is there isn't enough time to learn the material sufficiently between assessments.

Assessments were difficult and long

Really liked that Deon did walkthroughs of the assessments - this helped me improve on the next assessment as it highlighted what I'd done wrong.

Having practice quizzes to do before the actual quizzes could have helped my grade a bit

assessment feedback was very useful to help revise for future exams

I liked the first formative assessment to ease you in.

I felt like the final assessment was largely filled with the techniques explained in the last week, so for the heaviest weighted exam it tested the most complicated and new sections. The feedback from the previous tests was really good and well explained but I felt I didn't really get a chance to apply it.

No.

No

assessment format - randomised questions made quizzes a lot more stressful as they weren't in order of what you would do in the workshops, but the addition of 'part one' 'part two' etc to some questions did help. some were worded in difficult ways & 'trick' questions were unnecessary/seemed unrealistic

No

no

No.

Marks were released very quickly.

no

no
